Server Specifications

- Motherboard: PM Motherboard for Power Edge R7152x
- Processor: AMD Opteron 6234, 2.4 GHz, 12C Turbo CORE, 12M L2/12M L3
- Number of Processors: 2 Processors
- RAM: SFP+PCIe-8128GB Memory (16x8GB), 1333 MHz, Dual Ranked RDIMM
- Hard disk: 2x900GB 10K RPMSAS 6Gbps 2.5in

Accessing Through Remote Desktop

The development server at GIKI can be accessed using remote desktop option of Microsoft Windows

Logging Through Windows 8 or Windows 8.1

Click your mouse on the bottom right corner of your desktop, and then click on SEARCH. In the SEARCH box, type “REMOTE” you will see “Remote Desktop Connection” icon. Click on this icon.
Logging Through Windows 7

Click on the **Start Button** in the bottom left corner of your desktop. In the **SEARCH BOX**, type “REMOTE”. You will see “Remote Desktop Connection”. Click on this icon.

![Remote Desktop Connection](image)

You will see the following screen. Type **192.168.100.104** and click “Connect”.

![Remote Desktop Connection](image)
Type the username and password provided to you and click OK.

Now you can use the computer and your desired programs. For acquiring a username and password, send a query at devserver@giki.edu.pk

**Contact Information**

In case of an inquiry, send a query at:
